

Audiology Clinic

402-232-2273, ext. 3442

Clinic hours are Monday-Friday 0730-1630. We are currently located in the temporary buildings behind the main clinic, near the VA clinic entrance.

Audiograms - We have the resources to provide detailed hearing exams and diagnose the different types of hearing loss. We can also perform tympanograms.

Newborn hearing screening - Our new Oto-acoustic emissions analyzer provides objective evidence of inner ear function and is the keystone of our newborn screening program.

Acoustic Brainstem Response (ABR) testing - This tests the hearing nerve and the path the sound takes between the ear and the brain.

Hearing Aid evaluations - We provide hearing aids (including state of the art digital programmable aids) for active duty personnel. In addition, we provide hearing aids to retirees at cost, saving the retiree hundreds of dollars.

Hearing Conservation Program - Our program is responsible for ensuring all assigned personnel (at several bases) are involved with hearing conservation, are tested regularly and have hearing protection devices. We also support the flight medicine hearing program.
